

## The Client

Highway Management Construction (HMC)

## The Brief

Highway Management Construction needed a simple solution: they had a problem increasing security and maximising traffic flow at their storage yard for materials and vehicles for work on their landmark development of the Westlink M1 Motorway section.

## The Solution

We at NK Fencing were delighted to start the process of devising a solution to HMC's problem, and straight away we had a dedicated team of employees working on the project to meet HMC's needs. Our experienced team of estimators, draughtsmen and contract personnel worked together and in constant communication with HMC in order to ensure that the most appropriate solution could be offered.

As a result of the communication and consultation process, NK Fencing offered a practice solution to HMC in the form of our superb new automatic sliding gate system, the NK SALVUS CANTILEVER GATE.

The installation of the NK SALVUS Gate was carried out by NK Fencing service engineers, who were able to commission the entire gate system in less than one full day. This greatly minimised the amount of disruption caused to the daily activities of HMC personnel and suppliers.

## The Product

The NK SALVUS Gate is one of our latest revolutionary gate systems, delivered by NK Fencing to the highest possible standards. It comprises a heavy duty aluminium automatic sliding gate, ideally suited to maximise traffic flow in and out of premises. The NK SALVUS range sets a new

standard in safety of gate automation, with safety edges on all leading profiles.

NK Fencing provided HMC with a 2.4m high gate that is 10m wide with a galvanised and powder coated black finish. We also provided a key switch as means of an entry/exit system.

## Client Response

We were thrilled when Tim McWilliams from HMC said that the overall package offered by NK Fencing was "second to none in terms of the product and service offering. The gate was installed in half a day with very little disruption caused. This new gate system has enabled us to increase security at our Westlink site".

## The Conclusion

NK Fencing is delighted to have supplied and installed the NK SALVUS CANTILEVER GATE for HMC at the Westlink site in Belfast. This installation marks a great step forward in the technology and practicality of automated access control systems throughout Ireland. NK hopes to provide many more clients with this exceptional gate system which brings automation within your reach.

**NK SALVUS** – Where safety and security meet.
